

## Survival Tabs - A New Concept in Long Term Storable Foods.

Evolved From the Early Space Program [The Survival Tabs](#) have a long history. Back in the 1960's the Federal Government was searching for a food source that could be used in specialty situations. The objective was to find a product that would provide

The Best Possible Nutrition in the Smallest Possible Volume The resulting research was extremely involved and intense, and the product that evolved was used in the early space program. Eventually, a tablet was perfected and used widely as a emergency food. It came to be known as [The Survival Tabs](#).

12 Tabs Per Day Is All You'll Need [The Survival Tabs](#) will keep you alive and moving for months at a time, on the amount you can carry in your backpack. Our recommended consumption of 12 tabs per day may be decreased when other foods are available in adequate amounts and quality. Or it may be increased in times of complete starvation or extreme physical exertion. 12 Tabs provide

100% of the U.S. RDA of 15 Essential Vitamins & Minerals And that's not all. The reason [The Survival Tabs](#) are so effective, is that they are literally jam-packed with concentrated nutrition. The protein we use is of the highest quality only. That's important because protein can be of varied quality. If it is poor quality, your body will not be able to assimilate it properly. With most food products, 30%-60% of the calorie content leaves the body unused. Survival Tabs are so completely digestible that 99% of their calorie content can be actually utilized for energy. Ninety-seven percent of the protein content is available for repair or replacement of essential body substances, such as blood, muscle and nerves.

**10+ Year Shelf Life** The Tabs have been produced and packaged to last at least 10 years. We've accomplished this in several ways. Number one, we have compressed the tablets with thousands of pounds of pressure with our specialized tablet presses. Oxygen and moisture, the arch-enemies of food, cannot penetrate the tablets to destroy the ingredients. Number two, we use a heavy-duty, opaque bottle to pack the Tabs. The bottle does not allow either light or outside oxygen to penetrate and deteriorate the product. Number three, the closure is a specially designed screw- type lid which, along with being screwed tight on the bottle, is sealed with tamper resistant tape.

**Bottom Line** [The Survival Tabs](http://www.TheSurvivalTabs.Com) are a convenient, compact, lightweight, lifesaving food ration for any emergency. They are completely nutritious, have a 10+ year shelf life and are absolutely delicious. Just let them melt in your mouth...you'll probably chew them up...they are so irresistibly good-tasting!
